An improved analysis of antioxidants in edible oils using a Thermo Scientific Accucore Polar Premium HPLC column

General Information

Market: Food and Beverage

Matrix: N/A

Instrument type: HPLC

Description

AOAC Method 983.15 was developed to assay levels in finished food products. This method specifies a C18 column that provides suitable selectivity in many cases, but sometimes there can be matrix interferences. In this work the Thermo Scientific Accucore Polar Premium HPLC column, provides the speed, efficiency, and alternate selectivity to resolve propyl gallate from the unknown matrix peak.

Method Details

Instrument parameters

Instrument Parameter	Value
Run Time Length	14 min
Injection Volume	2 μ L
Column Oven 1 Temp	30 $^{\circ}$ C
UV Wavelength 1	280 nm
Pump Eluent A	water + 0.5% acetic acid
Pump Eluent B	methanol / acetonitrile / acetic acid (50:50:0.5 v/v/v)

Gradient Details
